I am Mayur Mehta, a 4th year B.Tech-M.tech dual degree student at Department of Civil Engineering at Indian Institute of Technology, Kanpur (http://www.iitk.ac.in/). I am looking for a research oriented summer internship in the field of Transportation Financing and would like to apply for the same under your guidance during the summers of 2014 (May to July).

Also my masters thesis is on Funding and Financing Highways and Public Transportation. Currently I am studying Credit enhancement mechanisms which are often applied to highway projects. In the coming months I will be looking at Minimum Revenue Guarantee and Foreign Exchange Risk Guarantee.

I have also done a project on effects of connectivity between two cities on scale and growth of economic activities. In this project I showed that in two neighboring cities, one being more developed, the means of connectivity influence the extent to which economic growth transfuses into the less developed city.

I am also involved in several team projects, so I have ample experience of working in a team. Details of my academic record and relevant courses have been enumerated in the attached resume, which also demonstrates my extensive interest in Project Financing. You will also notice my achievement of clearing Project Finance Module test as part of Certification In Financial Markets conducted by National Stock Exchange. I assure you of sincerity, hard work genuine interest in working on relevant topics under you. This opportunity would give me vital research experience and help in pursuing a higher degree abroad. I would be very grateful to get a chance to work in summer internship under your guidance.

Hoping for a positive response.

Yours sincerely

Mayur Mehta
